# Bright Coffee Shop Sales Intelligence

## Capture and prepare the sales data

**DATA SOURCE**
Bright Coffee Shop sales workbook
Daily transactions | Products | Quantities | Dates and times

**DATA INGESTION**
Convert Excel to CSV | Validate structure
Upload the validated file to Databricks

**ETL PROCESSING**
Extract: read the source file
Transform: remove duplicates, handle missing values and convert data types
Standardise prices | Create time buckets | Calculate total revenue
Load: store processed Databricks tables

## Organise the Databricks

**BRONZE Raw**
Original imported data
Transaction ID, date, time, product, quantity and unit price

**SILVER Cleaned**
Validated and enriched data
Time bucket, standardised price and cleaned product names

**GOLD Business Ready**
Summarised business metrics
Revenue by product and hour, units by category and rankings

## Turn information into executive action

**SQL ANALYTICS**
Revenue | Products
Time | Trends | Patterns

**DASHBOARDS**
Power BI | Excel
Tableau | Charts

**CEO DECISION SUPPORT**
Product and stock strategy
Marketing and revenue growth

**Reliable data → clear insight → faster business decisions**

# Dashboard and Analysis Blueprint

The dashboard makes the main revenue drivers, product performance and peak trading periods immediately visible

## Executive summary metrics

| TOTAL REVENUE | TRANSACTIONS | UNITS SOLD | TOP PRODUCT | PEAK PERIOD |
|---|---|---|---|---|
| SUM total amount | COUNT transaction ID | SUM quantity | Revenue ranking | Time bucket maximum |

## Recommended dashboard layout

| Dashboard section | Recommended visual content |
|---|---|
| Executive summary | Generic group |
| Product analysis | Bar chart of revenue by product type and contribution chart by product or category |
| Time analysis | Heat map of sales interval and line of revenue throughout the day |
| Performance analysis | Top 10 and bottom 10 products, monthly trend and daily trend |

## Core calculations

| Measure | Calculation |
|---|---|
| Total revenue | Unit_price X transaction_qty, then Sum (total_amount) |
| Total units sold | SUM (transaction_qty) |
| Revenue by product | SUM (total_amount) Group BY product_type or product_detail |
| Revenue by time | SUM(total_amount)GROUP BY transaction_time_bucket |
| Average sales value | AVG(total_amount) |
| Product contribution | Product revenue / total revenue x 100 |

## Business Recommendation

| | |
|---|---|
| **INCREASE STOCK OF BEST SELLERS** | **PROMOTE LOW PERFORMING PRODUCTS** |
| **LAUNCH PROMOTIONS DURING OFF PEAK PERIODS** | **AUTOMATE RECURRING SALES REPORTING** |

**Primary insight story: revenue drivers | product performance | peak sales periods | growth opportunities**
